Attachment B (Maintenance Requirements)

HYDRODYNAMIC SEPARATOR (HDS)

1. INSPECTION & CLEAN-OUT
 - a. The hydrodynamic separator should be inspected 2 times per year, once in the spring and once in the fall.
 - b. The visual inspection should ascertain that the system components are in working order and that there are no blockages or obstructions.
 - c. The hydrodynamic separator should be cleaned when the level of sediment has reached 75% of capacity in the isolated sump, or when an appreciable level of trash and hydrocarbons has accumulated. Clean during dry weather conditions. Use of a vacuum truck is generally the most effective and convenient method of removing pollutants from the system.
 - d. Dispose of all material removed from the hydrodynamic separator in accordance with local regulations.
